

Spring Street – Backend Engineering Internship Assignment

About Spring Street

Spring Street is a wealth management firm building an end-to-end global investing platform for resident Indians. We combine deep global markets expertise and quantitative research with thoughtful product design and engineering.

Interns work directly with the founders and product team on real-world systems and financial infrastructure.

Role Overview

The backend role focuses on designing scalable systems, financial data infrastructure, APIs, and data pipelines powering the product experience.

Assignment Objective

Design and implement systems that can power the Prisma factsheet/product experience.

Assignment Scope

Candidates are expected to think through:

- Database schema design
- Backend architecture
- Data pipelines / ETL systems
- API design
- Data freshness and maintainability

Data & Pipeline Requirements

- Fetch market data using Yahoo Finance
- Build systems that can update factsheet/product data daily
- Explore publicly available datasets around:
 - Market cap exposure
 - Country/region exposure
 - Sector exposure
 - Holdings/fund datasets

Preferred Stack

- Go (Golang) preferred
- Python can also be used
- REST APIs
- SQL / NoSQL databases

Evaluation Criteria

- Architecture thinking and system design
- Data modeling quality
- Backend engineering fundamentals
- API design clarity
- Code structure and maintainability

Submission Instructions

- Push your code/design docs to a public GitHub repository
- Include architecture explanations and README
- Ensure setup instructions are clearly documented
